

**September 5, 2019**

Dear CPS Energy Customer:

Thank you for being our customer. We invite you to attend an open house to learn about an upcoming substation and transmission project that will improve electric service reliability in your area. The Midtown Substation & Transmission Project constructs a new substation, transmission line and associated distribution lines just north of downtown San Antonio.

The new substation will require approximately 3 acres of property and a transmission line that will connect to the existing Comal to Olmos 138 kV transmission Line.

You can learn more about plans for the substation and transmission route at the open house. We welcome your questions, comments and concerns regarding this project. CPS Energy team members directly involved with the project will be present to answer your questions. The open house event will have an informal "come and go" format with information stations addressing specific areas of the project. Attendees are encouraged to visit each station and ask questions.

**CPS Energy Open House  
Midtown Substation & Transmission Project**

September 19, 2019

5:30pm-7:30pm

Temple Beth-El, San Antonio, Texas

211 Belknap Place

San Antonio, TX 78212

A brochure describing the project and a map of the study area is included in this packet. Additional information is also available at [www.cpsenergy.com](http://www.cpsenergy.com) Search: **Midtown**

I look forward to meeting you and answering your questions. Thank you in advance for taking the time to join us.

Sincerely,

A handwritten signature in black ink, appearing to read "Basileo Rocha".
